To investigate the association of three single-nucleotide polymorphisms (SNPs) with depressed patients, 55 Han Chinese subjects were genotyped for the five ADRB3 gene SNPs, including Ile16Asn (A16A) rs1800888, Gln27Glu (G27E) rs1042714, Ala61Gly (A61G) rs1042713, and -1237C>T (IVS4+90G>A) rs1042714. The results were compared with several clinical parameters of these subjects. It is noted that the Ile16Asn (A16A) rs1800888 was significantly associated with depression by comparing with healthy controls in allele model ($P=0.005$) and dominant model ($P=0.043$). In depressed subjects, A16A polymorphism carriers had a lower score of the Montgomery Asberg Depression Rating Scale than 16Asn homozygotes ($P=0.033$). The distribution of A16A genotype frequencies was significantly different between patient and control groups ($P=0.038$). However, the difference of the frequency distribution of A61G (rs1042713) was not significant between the two groups. We first found that A16A SNP in the ADRB3 gene might be associated with susceptibility to depression. } else { throw new Exception('Arithmetic operation with non-numeric value'); }

Download.rarQ: "unreachable code" in switch statement I am getting an error

when I use switch statement: `switch(nil) { case (value): // error // unreachable code } I`

know it is possible to use `case [nil]` or `case nil`, what should I use? A: This is covered at the Swift Programming Language Guide —

Flags and modes: Swift doesn't require explicit fallthroughs: anything that would normally be "fallthrough" by simply switching one control flow path to another will automatically do so if either path is terminated by an exit statement. If your

switch statement's cases don't all have corresponding exit statements, you'll get an error. If any of the cases don't

correspond to any case in the switch statement at all, you'll get an error. And as

@MartinR points out, that's a feature to help avoid meaningless empty cases, like this: `switch(nil) { case (something): break;`

`case nil: break; }` A: For the sake of

completeness, here is the technical reason for this: If any of the cases in a switch statement don't match any of
