Vietnam Lolita (13Yo) [VN][00. Find out more about this product. Note: This is a preview of songs/videos. roskamairplanedesignpartivpdf14DESCRIPTION: (Principal Investigator's abstract) In order to detect and quantify the anti-tumor effects of immunotherapy, it is necessary to measure changes in immune cell subpopulations in the tumor microenvironment. Elucidation of the mechanisms by which immune cells are recruited to tumors will aid in the design of novel immunotherapeutic strategies for the treatment of human neoplasms. The applicant's group has shown that induction of CD8 T cells against the autologous melanoma antigen MART-1 results in the recruitment of large numbers of cytotoxic T lymphocytes to the tumor site. The nature and dynamics of these cells are unknown. Dr. Isacson would like to determine whether they are natural killer cells. Her long-term goal is to develop immunotherapy for cancer based on boosting both the frequency and function of tumor infiltrating lymphocytes. She proposes to use a mixed lymphocyte tumor cell culture assay to determine the primary factors required for the recruitment and maintenance of cytotoxic T lymphocytes in the tumor microenvironment. She will identify the stimuli responsible for the recruitment of NK cells into the tumor site by measuring the expression of adhesion molecules on T and NK cells in a MART-1 transgenic mouse tumor line and determining the role of these adhesion molecules in promoting NK recruitment. She will also determine the role of granzyme B and perforin, key components of cytotoxic T cell lysis, in tumor lysis by NK cells and in recruitment of NK cells into the tumor. Dr. Isacson will subsequently study the same antigen, MART-1, in a human melanoma T line and will perform in situ hybridization and PCR analysis of mRNA extracted from the tumor in order to determine which types of T cells and NK cells express MART-1 mRNA. Mobile electronic devices, including many digital cellular telephones and smart phones, are frequently used to capture digital images. It is appreciated that there is a need for an electronic device, such as a digital cellular telephone, capable of providing a user with improved access to, and/or an overview of, digital images that may be obtained by capturing digital images of a specific object. For example, referring to FIG. 1, a digital cellular telephone A may be used
